

Evli Short Corporate Bond B

Fixed income fund that invests in short-maturity corporate bonds in a diversified manner.

MANAGER'S COMMENT

February was an exceptionally sad month for the markets and especially for humanity and society. The world has been following Russia's brutal war of aggression on Ukraine and from every imaginable angle, it is of utmost importance to end the war as soon as possible. Even before the threat of war emerged, the month offered a lot of shock elements for fixed income investors when the ECB surprised the market with their hawkish communication, resulting in an aggressive repricing of especially the short end of the yield curve.

Spreads were under heavy pressure throughout the month and the broad IG widened by 41 bps and HY by 73 bps.

The fund took a significant hit along with the broad market and netted -1.62%. Weakness came from across the board, but airlines, banks and utilities were hit hardest during the month. The direct Russian/Ukrainian exposure is negligible at 0.35% of weighted average revenue for the portfolio, but a war on European soil brings a lot of uncertainty, insecurity and hit investor sentiment, affecting all companies indirectly.

With the crisis being unpredictable, volatility has picked up significantly. For the credit investor, historically strong credit fundamentals and long maturity profiles offer strong support. Time is working for the credit investor in short maturities when strong credit fundamentals eventually tighten spreads as maturity nears.

BASIC INFORMATION

Fund Manager	Juhamatti Pukka
Benchmark	3-month Euribor Return Index

Evli Short Corporate Bond B

EVLI

RESPONSIBILITY SCORES

The Fund's responsibility scores are an assessment of the Fund's holdings from a responsibility perspective. The Fund's rating scale from best to worst is AAA, AA, A, BBB, BB, B and CCC. The ESG ratings distribution of the Fund's holdings are based on MSCI's analysis. MSCI is an independent ESG research provider offering a comprehensive global database.

Responsibility score	AA	Excellent (AAA)
Environment	A	Very Good (AA)
Social	BBB	Good (A)
Governance	BBB	Average (BBB)
Coverage of the analysis (%)	77	Satisfactory (BB)
		Weak (B)
		Very weak (CCC)

ESG means factors related to Environmental, Social and Governance issues.

ESG rating: companies are analysed and measured by how well they manage key risks and opportunities arising from ESG factors. The assessment is done within the industry.

Fund's Responsibility score: based on MSCI's methodology and taking into account the market value-weighted average of the fund's individual companies' ESG ratings, the ratings' trend, and the weight of companies with B and CCC ratings.

CARBON FOOTPRINT

Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). According to MSCI's analysis, the weighted average carbon intensity is categorized as following Very Low (0 to <15), Low (15 to <70), Moderate (70 to <250), High (250 to <525), and Very High (>=525).

DICTIONARY

Alpha describes the effect of the portfolio manager's investment choices on the fund's return compared with the return of an index portfolio with corresponding market risk, i.e. the additional returns attained by the fund in relation to its market risk.

Beta describes the sensitivity of the fund's value to changes in the benchmark index. If the value of the benchmark index changes by one percent, the expected change in the fund's value is beta x 1 percent. On average, the fund's value will change more than the value of the benchmark index if the beta value is greater than 1. A beta value less than 1 indicates the opposite, i.e. that the fund's value will change less than the benchmark value.

Carbon footprint Evli uses weighted average carbon intensity to measure the carbon footprint according to the recommendations of the Task Force on Climate-related Financial Disclosures (TFCD). The funds holdings' carbon intensity figures are based on the emissions figures produced by MSCI.

Duration measures the average repayment term (in years) of a fixed income instrument. Modified duration indicates the price sensitivity of a fixed income security to changes in interest rates. The higher the duration number, the greater the interest rate risk of the fund portfolio.

Information Ratio describes the long-term ability of a portfolio manager to add value through active portfolio management. If the Information Ratio is zero, the long-term return of the fund equals that of the benchmark index. In practice this means that the fund has outperformed the benchmark index, on average, for five years out of ten. The higher the Information Ratio, the greater the probability that the fund will outperform its benchmark. With an IR of 0.5 the fund has outperformed the benchmark, on average, in seven years out of ten, and with an IR of 1.0 in 8.5 years out of ten.

OAS describes average credit spread to similar maturity government bonds in basis points (0.01 percentage points). Measures the excess yield of corporate bonds to risk free rate.

Portfolio Turnover Rate is a measure of the length of time that a security remains in a portfolio during a given period. The portfolio turnover rate is calculated by subtracting the sum of subscriptions and redemptions of fund units (EUR S+T) from the sum of the securities bought and sold by the fund (EUR X+Y). The turnover is the abovementioned difference divided by the average market value of the fund, which has been calculated from the daily market values over the past 12 months. For example, if all assets have been sold and bought once it would equal to a turnover rate of 1. Portfolio turnover rate = ((X + Y) - (S + T)) / M x 100 / 2, where X = Securities bought, Y = Securities sold, S = Fund's fund units issued / subscribed, T = Fund's fund units cancelled / redeemed, M = Average total value of net assets.

R-Square describes the extent to which the fund's performance is dependent on the performance of the benchmark index. R-square is the square of the correlation coefficient.

SFDR-classification In accordance with the Sustainable Finance Disclosure Regulation (SFDR), article 8 funds promote sustainability factors among other features, and article 9 funds aim to make sustainable investments. Other funds address only sustainability risks in their investments decisions (article 6 funds).

Sharpe Ratio indicates the size of return relative to risk taken. The Sharpe ratio measures the fund's return (with volatility of one percent) in excess of a risk-free return. The higher the Sharpe ratio, the more favorable the relationship between return and risk.

TER (Total Expense Ratio) is a measure of a fund's total expenses in relation to its average assets and is expressed as an annualized percentage. The expenses include all the fund's management and custody fees and any profit-related fees. Securities commissions are excluded. TER = A + B + C + D, where A = Management fee charged from the fund's assets, B = Custodian fee that may be charged separately from the fund's assets, C = Account maintenance and other bank charges that may be charged from the fund's assets, D = Any other fees which, according to the fund's rules, are charged directly from the fund's assets. As a rule, funds registered in Finland do not make such charges on top of trading fees.

Tracking Error indicates the risk of active portfolio management in relation to the risk of the benchmark index. The higher the number, the more the fund's performance differs from the benchmark's performance. If the tracking error is 5%, the fund's return will deviate in about two years out of three ± 5% of the benchmark's return. The tracking error is zero if the relative weights of the fund's investments are exactly the same as in the benchmark index. Tracking error increases if investment weights are changed relative to the weights of the benchmark index.

Volatility is a risk measure generally used in financial markets. It reflects variability in the return of an investment or a portfolio. The higher the volatility, the greater the variability in return and the risk involved. If the fund's expected return is 12% and the volatility is 20%, then the fund's return for two years out of three is 12 ± 20%, that is, between -8% and +32%. Volatility is calculated on the basis of the standard deviation of weekly returns and expressed as an annual percentage.

Yield (YTM), % Estimated annual rate of return to maturity (yield to maturity).

YTW, % Lowest estimated annual rate of return, if bonds are callable before maturity date (yield to worst).
